

Side channel pumps PN 16 - 25

Selfpriming centrifugal pumps

SON/SRN - SOB/SRB

Technical description

1. Application

Pumps SON/SRN and SOB/SRB are applied in chemical industry, in apparatus engineering and in shipping industry. Due to their characteristics they can also be used in general process engineering, in steel and mechanical construction, in agriculture and for domestic purposes, for sprinkling, water supply and irrigation. They can generally handle clean, slightly contaminated or aerated liquids. The liquids pumped must not crystallize or contain abrasive particles.

2. General design

Pumps SON/SRN are side channel pumps for light duties with PN 16.

Pumps SOB/SRB are side channel pumps for medium duties with PN 25. All pumps are selfpriming, in horizontal execution and in modular construction. Side channel pumps are recommended for small capacities at high pressures.

SON/SRN and SOB/SRB pumps consist of standard components that are interchangeable in all materials.

The combination of a minimum number of basic components permits the construction of a large variety of pumps.

2.1 Characteristics

Pumps SON/SRN and SOB/SRB have the lowest power demand at the highest capacity!

Pumps SON/SRN and SOB/SRB are selfpriming; they are able to handle aerated liquids!

Pumps SON/SRN and SOB/SRB must only be used within the indicated performance range!

2.2 Advantages

- 1.) High efficiency
- 2.) Low noise level
- 3.) Excellent selfpriming ability and favourable NPSH values.
- 4.) Good safety run and long life due to locked impellers and resistant ball bearings.
- 5.) Dimensions for pumps in different materials or shaft sealing executions are the same.

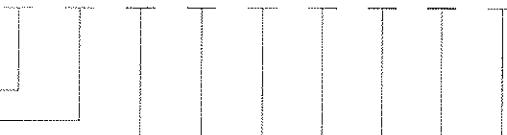

2.3 Pressure

Pumps SON/SRN and SOB/SRB must always be operated against open pressure valve. The maximum allowed head is indicated in the performance curves. Pumps must never be operated against closed pressure piping.

3. Designation

S O N 22 3 WW BS / II. 10

Selfpriming side channel pumps

O = oval flanges with counterflanges

R = round flanges without counterflanges

N = horizontal execution with baseplate

B = horizontal bloc execution

Series: 10 - DN 25 or R 1"

11 - DN 25 or R 1"

21 - DN 32 or R 1"

22 - DN 32 or R 1 1/4"

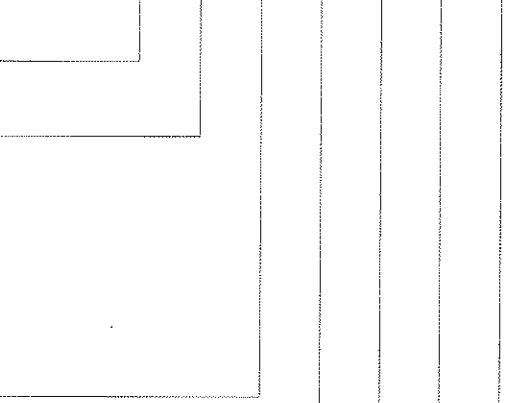

33 - DN 32 or R 1 1/2"

44 - DN 40

55 - DN 50

66 - DN 65

Number of stages (1 to 6 stages)

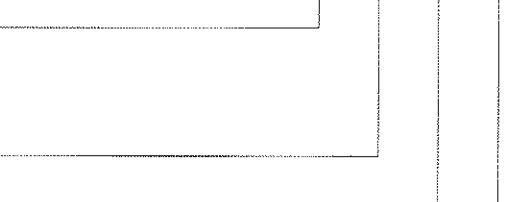

Bearings

(W = one external antifriction bearing

one internal sleeve bearing

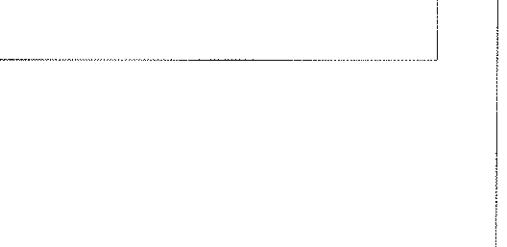

WW = two external antifriction bearings)

Shaft sealing:

Stuffing box: without designation, BS

Mechanical seal: G2, G11, G13

Execution for SON/SRN:

I = in bare shaft execution

II = with flexible coupling

III = with flexible coupling and baseplate

IV = with motor on common baseplate

for SOB/SRB: V = with housing bracket and flexible coupling

VI = incl. motor coupled with pump

Material code

4. Operating data

4.1 Performance range

Capacity: 0,3 to 36 m³/h for SRN/SRB; 0,3 to 7,5 m³/h for SON/SOB

Head: max. 250 m.

For details see separate performance curves.

4.2 Speed

1450 rpm – 50 Hz alt. 1750 rpm – 60 Hz

The data of the performance curve at 1450 rpm can be converted for other speeds as follows:

Capacity:

$$Q_2 = Q_1 \cdot \left(\frac{n_2}{n_1} \right)$$

Head:

$$H_2 = H_1 \cdot \left(\frac{n_2}{n_1} \right)^2$$

Power demand:

$$P_2 = P_1 \cdot \left(\frac{n_2}{n_1} \right)^3$$

4.3 Pressure and temperature range

Pump	Pump material	Stuffing box exec. max. press. in bar	temp. * °C	Mechanical seal exec. max. press in bar	temp. * °C
SON	10, 12	16	-20 to +120 (140)	10 (16)	-20 to +120 (140)
	22	16	-20 to +100	10 (16)	-20 to +100
	32	16	-20 to +120 (140)	10 (16)	-20 to +120 (140)
SRN	10, 12	25	-20 to +120 (140)	16 (25)	-20 to +120 (140)
	22	25	-20 to +100	16 (25)	-20 to +100

* For other temperatures please refer to our pump type SRZ/SRZS.

4.3.1 Suction head

The pumps are capable of suction lifts of up to 8,5 m (for cold water). However, this will be reduced when pumping liquids with a higher temperature, viscosity or vapour pressure.

The pumps are capable of handling aerated liquids as well as lifting liquids over obstacles.

4.4 Direction of rotation

Clockwise seen from the drive end (also anti-clockwise on special request).

4.5 Test pressure

1,3 x working pressure

4.6 NPSH

The NPSH values are indicated on the performance curves.

4.7 Power requirements

The power requirements indicated on the performance curves have been measured at the pump shafts, and are valid for liquids with densities of 1 kg/dm³ and viscosities of 1 cSt. For other densities or viscosities the power demands change as follows:

Ex.: density = 1,5 kg/dm³

Effective power demand = power demand according to performance curve x 1,5. While the capacity (m³/h) and head (mlc) do not change, the pressure must also be multiplied by 1,5.

For viscosities higher than 1 cSt, the power demand will increase while the head decreases (see item 4.8).

4.8 Viscosity

The maximum viscosity of the liquid pumped should not exceed 228 cSt (30 °E). As viscosity increases, the power demand will also increase while the head developed by the pump will decrease.

The performance curves are valid for a density of 1 kg / dm³, a maximum viscosity of 21 cSt (3 °E) and a temperature range of -20 to +140 °C. For higher values, please refer to the correction factors indicated on the special curve which is available on request.

4.9 Tolerances

Capacity: ± 5 %

Head: ± 5 %

Power demand: ± 10 %

Performance tests according to DIN 1944/III may be done on request.

5. Construction

Pumps SON/SRN and SOB/SRB are selfpriming horizontal pumps in modular construction according to the principle of side channel pumps.

5.1 Casing

Suction and discharge casing and also suction and discharge stage casing are transverse pitched.
The casings are sealed by flat gaskets resp. by teflon cord for pump material 32 (stainless steel).

5.2 Nozzle position

1.) SON/SOB . . . W

The suction cover is directed horizontally in axial direction and the discharge casing in radial direction upwards.

2.) SON/SRN and SOB/SRB . . . WW

The suction and the discharge casing are radially directed upwards. Generally the discharge casing is on the motor-side (for pumps in anti-clockwise direction of rotation the suction casing is on the motorside).

5.3 Connections

The suction and the discharge connections are the same.

5.3.1 SON/SOB

The connections are oval flanged with PN 16. The dimensions correspond to our own works norm.

The counterflanges are always delivered with the pump and have a Withworth pipe thread according to DIN 259.

5.3.2 SRN/SRB

The connections have round flanges with PN 25. The dimensions correspond to DIN 2501. The counterflanges are not delivered with the pumps. The delivery of counterflanges according to DIN 2566 is possible. Morecharges according to our pricelist. Other flange executions are not possible (please refer to our pump SRZ with PN 40).

5.4 Impellers

Radial vane impellers with axial thrust compensation via relief holes are fitted to all pumps. To compensate for the residual end thrust of pumps in material 10, 12 and 22, impellers are locked on the shaft, and use the antifriction bearing as a locating bearing. For pumps in material 32, axial thrust is absorbed by a ceramics disc inserted in the impeller and suction stage casing.

5.5 Shaft

Pumps are fitted with stiff shafts designed to ensure smooth trouble free operation.

5.6 Bearing

5.6.1 Execution W

Motor side: Grease lubricated ball bearing according to DIN 625. Maintenance free, with sealed bearing for approximately 10.000 working hours. Suction side: sleeve bearing.

5.6.2 Execution WW

Both sides: Grease lubricated ball bearings, with the motor side bearing locked to absorb axial thrust.

5.7 Coupling

Flender-N-Eupex coupling (special execution)

5.8 Shaft sealing

5.8.1 Stuffing box

5.8.1.1 Without designation

Standard uncooled, unbalanced stuffing box for SON and SOB. Maximum pressure 10 bar.

5.8.1.2 Execution BS

The stuffing box on the discharge side is connected via a crossover pipe to the suction side stuffing box for SRN and SRB pumps. For pressures between 10 and 25 bar.

5.8.2 Mechanical seal

Mechanical seals may be fitted in place of stuffing boxes if required. Usually single unbalanced mechanical seals are used. The liquid pumped should be free of abrasive particles as these will cause accelerated wear of the seal faces. For material specifications, see item 6.2.2.

5.8.2.1 Execution G2

Standard mechanical seal for pressures up to 10 bar.

5.8.2.2 Execution G 11

Standard mechanical seal for pressures up to 16 bar.

5.8.2.2 Execution G 13

Optional for pressures up to 25 bar.

5.9 Special executions

For all other duties, please refer to our PN 40 range of side channel pumps, designed in accordance with DIN 24254. These pumps are designed to handle pressures up to 40 bar, and temperatures up to 220 °C.

Head [m] = total head (geod. suction head + geod. discharge head + friction losses) – Motor power (kW) for liquids with a density of 1 kg / dm³
Tolerance: capacity and head: ± 5 %
power absorbed: + 10 %
